FYI.

Also, I spoke with Prock Marine regarding the costs of upland versus offshore disposal. Their most recent experience with upland disposal in Rockland was with MBNA and they reported to me that the cost is about double offshore. In this case, that would be an additional \$150,000.00 which makes the Biological Testing for offshore (approximately \$70,000.00) cost effective, if somewhat of a gamble. More to come.

Good Morning Pete,

I'd like to follow up on the conversation the four of us had about potentially "phasing" the dredging at the Fish Pier so we place the sand over the rest of the material. We intend to calculate the total volume of sand by remapping it this week based upon a new cross-section of grain size analyses moving seaward on the east side. We'll again probe to final depth to determine if any layering exists. Is that consistent with our discussions? Any other suggestions? We'll likely do it Thursday. Thanks.

Good afternoon Bud,

Haven't heard anything in a while, how is the project coming along with ACOE?

Thanks,

Matt
