

## **ATTACHMENT 7**

**DRAFT INTEGRATED CONCEPTUAL SITE MODEL FOR  
THE SEAL ISLAND MMRP FUDS SITE**

Impact to sediment may also occur from surface soil via runoff of particulates.  
 A separate risk for surface soil and subsurface soil may be combined to represent risk from total soil for some receptors.  
 Impact to surface water may also occur from infiltration of groundwater.  
 \*Primary sources will vary by site but are expected to include open burn/open detonation areas, disposal/burial areas, impact areas, and firing areas, etc.
