DEAR SUSANNE,

I Todd Hanson am writing you as part of public comments in regards to the application for a pier and rock crushing facility by Salmons Incorporated in Prospect Maine.

My Points of Concerns are as follows:

- * The possible disruption of the mercury (that isn't even addressed in the application) that remains in the river due to the HoltaChem Plant disaster.
- * The possible hampering of the clean-up effort related to the settlement of MPA, NRDC Vs. Mallinckrodt / HoltaChem.
- * The local effects of the air quality created from blasting, crushing, transporting of the granite from Heagan Mountain, creating dust and high levels of (silica) a known group 1 carcinogenic.
- * The local effects of the quality and quantity of drinking water due to the blasting of Heagan Mountain and the crushing plant that is proposed to draw 50,000 gallons of water from our aquifer.
- * In multiple parts of the application it has been stated that the proposed site of the pier and rock crushing facility is in an *"undeveloped area and avoids contact with local residents"* which in fact is proposed to be located *(to the best I can figure)* about 600' from my well and residence. My home was constructed in 2020 and therefore does not show up on the google earth photos used in the application.

I believe this proposal is not in the best interest of the Penobscot River, the town of Prospect or the State of Maine.

Todd Hanson
427 Bowden Point Road
Prospect, ME 04981
